

**VITALIC ElektroCALF is a feed additive developed to compensate for dehydration, electrolyte and acid-base imbalances and to fill the energy deficit, which occurs during digestive disorders (diarrhea) in calves.**

## ADVANTAGES

- It contains glucose, glycine, citrate, acetate and propionate agents which will promote the absorption of sodium ( $\text{Na}^+$ ) and water. It balances the fluid lost with diarrhea by increasing the net supply of body fluid and electrolytes by rapid rehydration.
- Thanks to the ideal concentration of electrolytes, calves quickly regain their normal electrolyte balance.
- ElektroCALF Sodium bicarbonate, Sodium citrate and Sodium acetate buffer system helps to optimize blood pH. Metabolic acidosis is tried to be prevented with a long-term alkalization.
- ElektroCALF Provides maximum energy increase with dextrose, lactose and glycine.
- **HYDROPHOBIC FIBER STRENGTH:** With the natural fibers it contains, ElektroCALF helps to protect the calf against dehydration by reducing the amount of fluid excreted in the feces.

	<b>Closes the Energy Gap</b>
	<b>Balances Fluid Lost in Diarrhea</b>

## APPLICATION

- VITALIC ElectroCALF PLUS used in calves during digestive disorders (1-7 days). Oral use only. 100 g of VITALIC ElectroCALF PLUS should be mixed with 2 liters of warm milk or water at a temperature of 35-40 °C and give immediately. Apply 2 times a day.
