

| MULTI FONCTIONNAL TOXIN BINDER

Toxin Binder is an auxiliary feed additive reduces the bioavailability of mycotoxins in final feed and raw feed.

Enriched with vitamins.

WORKING PRINCIPLE

- Active ingredient is clinoptilolite, which is hydrated aluminium silicate. Supplemented with Saccharomyces cerevisia live yeast strain and yeast cell wall (MOS + B-Glucan).

PRODUCT FEATURES

Klinosacc 15:

- Saccharomyces cerevisiae live yeast strain content improves ruminal fermentation by staying alive in the rumen for a long time. Increase the rate of utilisation of feed.

Klinosacc 15 and Klinotox 10:

- High binding capacity for different mycotoxins.
- Reduces the problems in animal performance By eliminating the negative effects of mycotoxins,
- Increase yeast cell wall (MOS+B- Glucan) capacity to bind various micotoxins,
- MOS+B-Glucan reduce the negative effects in the digestive system by binding harmful bacteria in the intestines.
- High gas adsorbing capacity, toxin binder keeps ammonia in the rumen at a certain level and prevents gas entrapment cases.
- Increases the effect of nitrogen used by microorganisms for protein synthesis by absorbing ammonia formed in the rumen in ruminants.
- Reduce effect on the characteristic malodor formation in animal feces. It reduces the number of flies in the shelter and increases animal welfare.
- Provides a significant reduction in diarrhea cases.
