

VITALIC BUFFER PLUS

Rumen Modulator

ORGANIC ADDITIVE RUMEN MODULATOR

The rumen environment has an essential role in ruminant feeding. When the rumen's normal physiological balance change, the digestion of nutrients is adversely affected. Application by Highly acidic feeds such as silage or concentrated feeds, which are rich in starch, is the most important factor that reduce rumen ph.

ADVANTAGES

Vitalic Buffer Plus:

- Helps maintain a certain level of hydrogen ion concentration in rumen and body fluids.
- Helps ruminal adaptation in ruminant animals.
- Reduces the risk of ruminal acidosis.
- Supports ruminal fermentation by maintaining optimum rumen pH.

Vitalic Buffer:

- Protects Rumen.
- Effective against heat stress.
- Increases dry matter consumption.
- Increases milk yield and quality.

Longer Rumen Stability
with Sea Algae

Supported with live
Yeast Strain

More Than Tampon
