VITALIC **PRECALF PASTE**

IMMUNE SUPPORTING CALF PASTE

It is a complementary nutritional supplement supporting the immune system, rich in vitamins, minerals, energy and immunoglobulin, which should be used in the first 12 hours after birth in newborn calves.

Precalf paste contains a combination of highly digestible milk-based immunoglobulin proteins and **Enterococcus faecium (DSM 7134)** **Lactobacillus rhamnosus (DSM7133)** strains with a total activity of at least 1.0 x 10¹⁰ CFU/g from intestinal flora regulators.

ENERGY SOURCE

MPG**Glucose****Glycerine**

What are the Benefits of Precalf Paste?

- They show a strong effect against these pathogens by preventing the attachment of bacteria to epithelial cells.
- It stimulates beneficial bacteria in the intestinal flora and protects the intestine from unwanted microorganisms (Escherichia coli and coliform bacteria, etc.).
- It helps to stimulate the calf's appetite by providing a good colostrum intake.
- It helps the calf to get up and suck faster by increasing its activity in the first few hours of its life.
- It provides the supply of glucose needed by animals and gives energy.
- Increases daily live weight.
- Increases the rate of feed conversion
- Calves develop healthily and reliably.

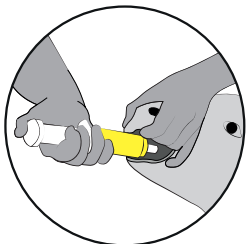

It strengthens immunity.

Calves with strong immune systems have less diarrhea.

Reduces the mortality rate from diarrhea-caused.

Treatment costs are reduced.

Recommended Use

It is given by squeezing a syringe into the back of the tongue after birth. Suitable for calves under 4 months.

Warnings and Precautions

- Do not use on animals other than the specified species.
- Please contact for information.
